Azure Virtual Desktop

Azure Virtual Desktop

A comprehensive, highly secure virtualization service on Microsoft Azure.

AVD Architecture

Host pool

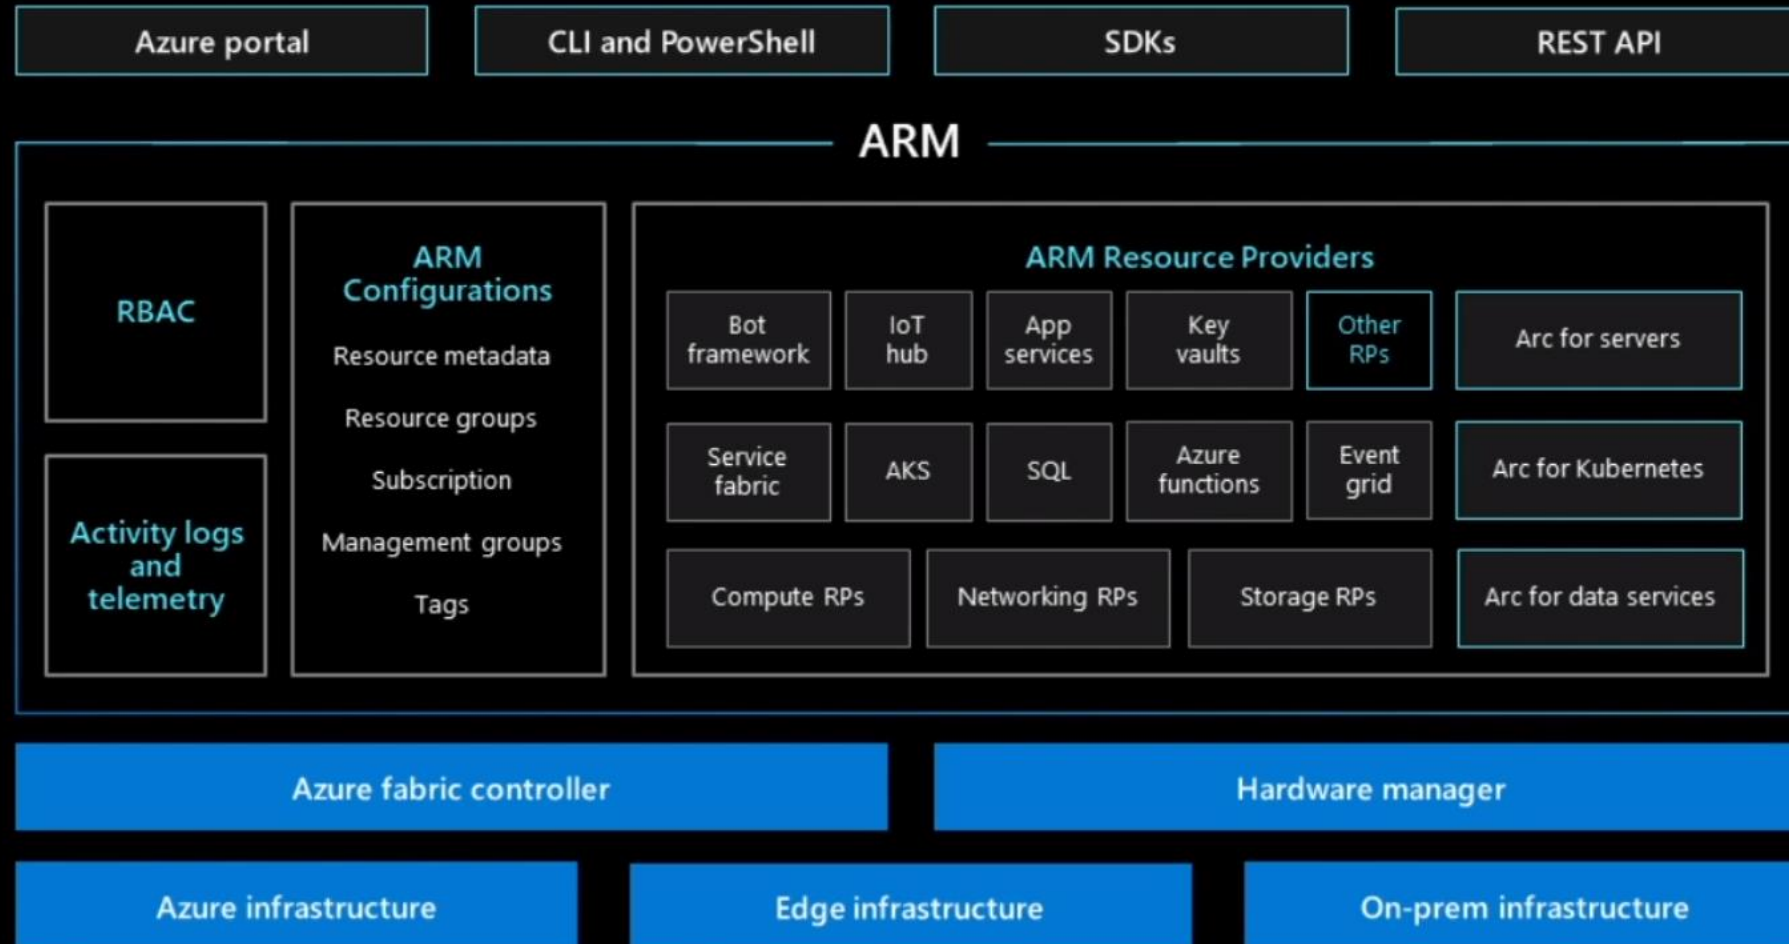

‘Golden image’ approach advantages :

- Consistency
- Can gain large management efficiencies
- Test image changes in an DTAP way
- Roll back any time

Manual way:

- *Deploy a (new) template Image VM*
- *Make the application updates and changes*
- *Sysprep the template Image VM*
- *Capture towards Azure Compute Gallery*
- *Create hostpool registration key*
- *(re) create Session Host VM's in hostpool*

Azure Resource Manager

Template format

In its simplest structure, a template has the following elements:

JSON

 Copy

```
{
  "$schema": "https://schema.management.azure.com/schemas/2019-04-01/deploymentTemplate.json#",
  "contentVersion": "",
  "apiProfile": "",
  "parameters": {  },
  "variables": {  },
  "functions": [  ],
  "resources": [  ],
  "outputs": {  }
}
```

ARM Template complexity

```
308     "licenseType": "Windows_Client",
309     "hardwareProfile": {
310       "vmSize": "[parameters('virtualMachineSize')]"
311     },
312     "availabilitySet": {
313       "id": "[resourceId('Microsoft.Compute/availabilitySets', parameters('availabilitySetName'))]"
314     },
315     "osProfile": {
316       "computerName": "[format('{0}-{1}', parameters('sessionHostNamePrefix'), add(range(0, parameters('numberOfInstances'))[copyIndex()],
317       "adminUsername": "[format('{0}-{1}-adm', parameters('sessionHostNamePrefix'), add(range(0, parameters('numberOfInstances'))[copyInd
318       "adminPassword": "[parameters('localAdminPassword')]",
319       "windowsConfiguration": {
320         "timeZone": "[variables('vmTimeZone')]"
321       }
322     },
323     "storageProfile": {
324       "osDisk": {
325         "name": "[format('{0}-{1}-{2}', parameters('sessionHostNamePrefix'), add(range(0, parameters('numberOfInstances'))[copyIndex()],
326         "managedDisk": {
327           "storageAccountType": "[variables('storage').type]"
328         },
329         "osType": "Windows",
330         "caching": "[variables('virtualmachineosdisk').cacheOption]",
331         "createOption": "[variables('virtualmachineosdisk').createOption]"
332       },
333       "imageReference": {
334         "id": "[variables('imageResourceId')]"
335       },
336       "dataDisks": []
337     },
338     "networkProfile": {
339       "networkInterfaces": [
340         {
341           "id": "[resourceId('Microsoft.Network/networkInterfaces', format('{0}-{1}-{2}', parameters('sessionHostNamePrefix'), add(range(0
342         }
343       ]
344     }
345   },
346   "dependsOn": [
347     "[resourceId('Microsoft.Compute/availabilitySets', parameters('availabilitySetName'))]",
348     "[resourceId('Microsoft.Network/networkInterfaces', format('{0}-{1}-{2}', parameters('sessionHostNamePrefix'), add(range(0, parameters
349   ]
```

Bicep

Simple declarative language to provision infrastructure to Azure.

Intuitive

Easy to read and to author

Transpiles to ARM Templates

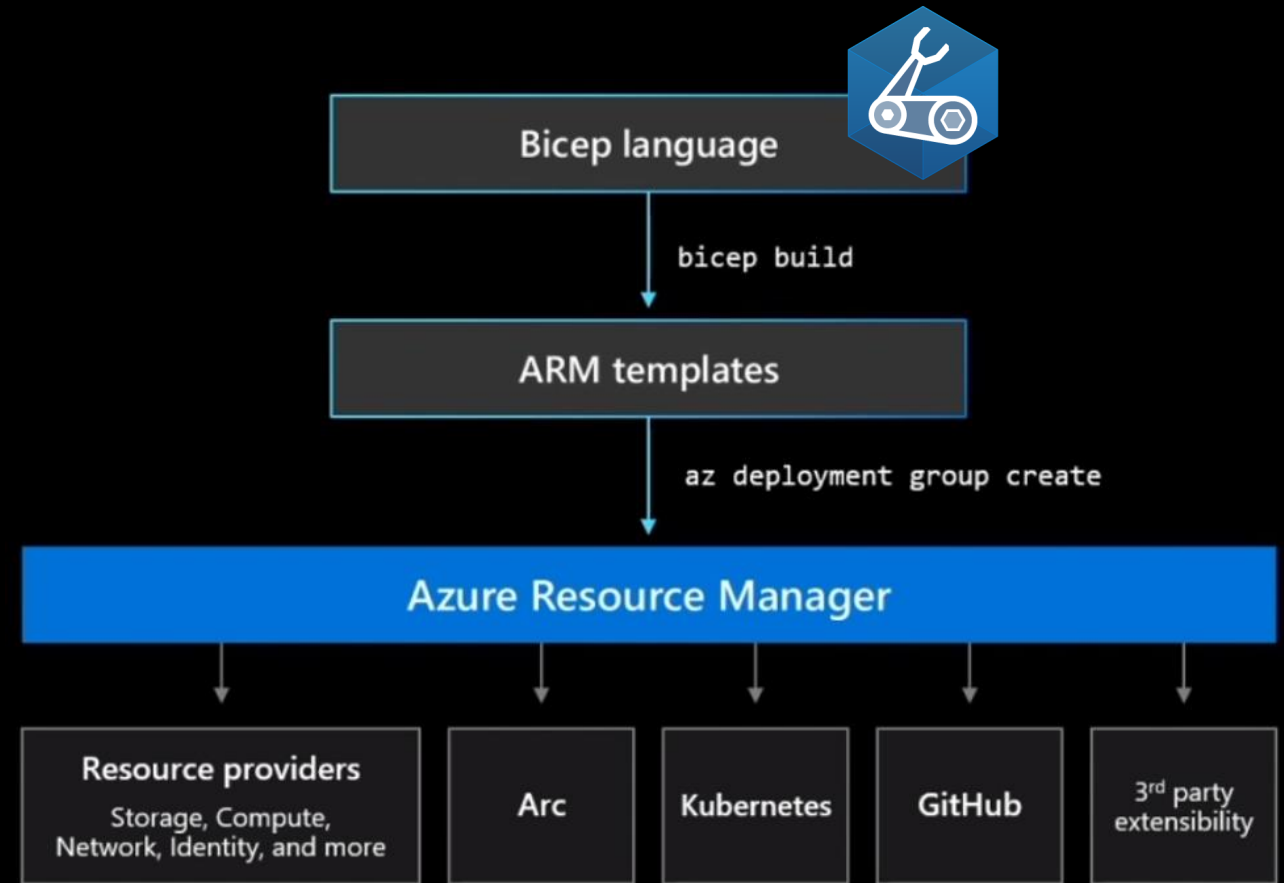

Leverage ARM template knowledge and investments

Modular

Abstract common blocks of code into reusable parts

Open Source

Transparency and community
